  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

c. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

rUNCTION: Regulates cif4Es activity by preventing its assembly into the elf4F complex (By similarity).

SUBUNIT: EIF4EBB3 interacts with EIF4E (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PTM: Phosphorylated (By similarity). SIMILARITY: Belongs to the eIF4E-binding protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Swiss-Prot entry is copyright. It is produced through a collaboration een the Swiss Institute of Bioinformatics and the EMBL outstation European Bioinformatics Institute. There are no restrictions on it

NIH - Zebrafish Gene Collection (ZGC) project;

Submitted (JAN-2003) to the EMEL/GenBank/DDBJ databases.
-!- FUNCTION: Regulates eif4ela activity by preventing its and into the eIF4F complex (By similarity).
-!- SUBUNIT: Interacts with eif4ela.
-!- SIMILARITY: Belongs to the eIF4E-binding protein family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PTM: Phosphorylated on serine and threonine residues in to insulin, EGF and PDGF.
SIMILARITY: Belongs to the eIF4E-binding protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the MAP kinase pathway.

the MAP kinase pathway.

SUBUNIT: Nonphosphorylated EIF4EBP1 competes with EIF4G1/EIF4G3

interact with EIF4E; insulin stimulated MAP-kinase (MAPK1 and interact) phosphorylation of EIF4EBP1 causes dissociation of the complex allowing EIF4G1/EIF4G3 to bind and consequent initiation of translation. Rapamycin can attenuate insulin stimulation,
                                                                                                                                                                                                                                                             GO:0005515; F:protein binding; IPI.

                                                                                                                                                                                                  FUNCTION: Regulates eIF4E activity by preventing its assembly into the eIF4F complex. Mediates the regulation of protein translation by hormones, growth factors and other stimuli that signal through the MAP kinase pathway.

SUBUNIT: Nonphosphorylated EIF4EBP1 competes with EIF4G1/EIFG3 to interact with EIF4E; insulin stimulated MAP-kinase (MAPK1 and MAPK3) phosphorylation of EIF4EBP1 causes dissociation of the complex allowing EIF4G to bind and consequent initiation, mediated translation. Rapamycin can attenuate insulin stimulation, mediated
                                                                                                                    to insulin, EGF and PDGF.
SIMILARITY: Belongs to the eIF4E-binding
                                                                                                                                              TISSUE SPECIFICITY: Expressed in all tissues examined; highest levels in fat and skeletal tissue, lowest levels in kidney. PTM: Phosphorylated on serine and threonine residues in respons

P06730:EIF4EL3; NbExp=1; IntAct=EBI-74090,
PTM: Phosphorylated on serine and threonine
to insulin, EGF and PDGF
SIMILARITY: Belongs to the eIF4E-binding px
                                                                                                                                                                                                                                                                                                                                                                                                             O'J. 14:5701-5709(1995).

PUNCTION: Regulates eIF4E activity by preventing its assembly int the eIF4F complex. Mediates the regulation of protein translation by hormones, growth factors and other stimuli that signal through the MAP kinase pathway.

SUBUNIT: Nonphosphorylated EIF4EBP1 competes with EIF4G1/EIF4G3 tinteract with EIF4E; insulin stimulated MAPKinase (MAPK1 and MAPK3) phosphorylation of EIF4EBP1 causes dissociation of the complex allowing EIF4G1/EIF4G3 to bind and consequent initiation of translation. Rapamycin can attenuate insulin stimulation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  d. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein search, using

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 4, Application US/10096703
Patent No. 6677126
GENERAL INFORMATION:
Sequence 7860, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/231,768

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
